ZenaHinge:

This type of self-defense object or gadget is particularly aimed at the functioning of the non-lethal system. First of all, thanks to the impressive amount of foam-rubber, padded spring elastics enormously remove the kinetic energy of return and therefore the backlash, instead in the terminal part, the one where the tip part is present contains four glued nails that act as a harpoon. Once implanted in the meat if they can plant themselves strongly enough, if hooked and well attached they can uproot small flaps or tissues together with meat, bone and cartilage causing tremendous pain. Combined with the rope connected to a hook to complete the anti-disarmament system becomes a very versatile tool in terms of non-lethal defense, the final part at the end is a screwdriver.

With the new system by inserting a hexagonal nut bolt with a sharpened tip thanks to a drill and an angle grinder connected thanks to a hole made in the back with a drill press and connected with rolled copper to ensure a perfect anchorage, re-anchored with spun iron rolled helically on itself, finally a chemical based on graphite, bicarbonate and cyanoacrylate in union with hot glue to finish the application of the extended blade without the need for welding or brazing.
